

Aesthetic 'Split Screen' Divide

Materials:

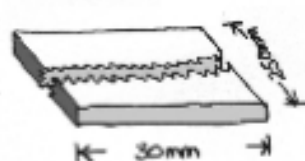

- Ali Flat 30mm x 300mm
- Ali Angle 30mm x 30mm x 300mm
- Cycle inner tube
- Adhesive to stick ali and innertube

Step1 Anneal. Heat up the ali angle and use a match until charcoal marks appear on the angle then quench.

Step 2 Turn angle upside-down on a block of wood and give it a good clout with a hammer along the top edge until the shape starts to form.

Step 3 Cut to required width (30mm) and length to fit vertically up the outside centre of your windscreen. (approx 250mm)

Step 4 Cut a similar length of flat aluminium bar for the inside of the windscreen

Step 5 Stick both sides to windscreen with inner-tube sandwiched between ali and glass.

Finish off with moulding top and bottom made out of ali or painted wood.
